

CUSTOMER SUCCESS STORY

DevOps: A low performing project with a high allocation of resources

Company Type: Bank

Developers Analysed: 9,000 to 11,000 Developers

The Background

The client had a large project, Project X, that was ~25% less productive than the average project across the client's entire software estate. However, Project X was the client's largest project, which had been allocated ~50% of the company's resources. As a result, the client wanted to understand the project's bottlenecks and issues as well as why they were occurring.

Which Product?

Developer Analytics (DA) was fully implemented into the clients systems and had been running for quite some time when the request was made.

The Results

BlueOptima uncovered that a large proportion of the client's coding effort (~40%) was delivered

by long term staff, which represent ~10% of the developers working on Project X. Additionally, the data showed that ~40% of developers were inactive, which lowered the overall team's averages.
